

AXIOM SPACE

Axiom Space has signed a 6.5 year lease at 21300 Gulf Freeway, the former Fry's building. The 147,000 square foot facility will house the division of Axiom Space that is tasked with creating Axiom Station—the world's first commercial space station.

Axiom Space was created in 2016 by Co-Founders Kam Ghaffarian and Mike Suffredini. Suffredini was NASA's longest sitting International Space Station Program Manager prior to creating Axiom Space. This year, Axiom Space successfully completed the first private mission to the International Space Station, and the company is on track to launch Axiom Hub One (the commercial space station) in 2024. The creation of Axiom Station is the pillar of a thriving commercial network in Earth's lower orbit, and much of the work to accomplish this historical feat will transpire in Webster.

Axiom Space's new Webster location will employ a workforce of almost 600 and be operational by early August 2022.

Axiom Station will be the world's first commercial space station and the engineers building humanity's next-generation home in space will be located in Webster!
